Thanks to the increasing pace of technological developments in the world, we are now encountering “modern” design no less than once a month or even several times a month. From what I have been seeing, it seems like we are so excited about it that we would give anything for it, not just its gadgets. As a matter of fact, there are so many modern design elements that it would be difficult for you to resist them unless you have not been exposed to them at all. Among other things, your smartphone, tablet, and desktop computers will all be and surely be in the modern design era. If you're so excited with the pace of technological developments then I would urge you to stay up to date with them. There will come a time when I will also be using a tablet computer, smartphone, and desktop computer as my main computers while also using a laptop computer for work. I won't be investing in them all at the same time, but want to try them all with a variety of Adobe products. Interesting thing would be to see the paper less workflows and see how they work with each of these devices such as the Adobe Photoshop, Adobe Lightroom, and Adobe Acrobat.
