If you're a business-oriented PDF viewer you'll love the new PDF Expert 4.5.3 and the suite of apps it includes, because it brings a new level of integration and ease of use far beyond what you can get with tools like Adobe Acrobat. The large feature list, also, makes it easy to pick and choose the tools that best suit your work, which is something no other PDF viewer can do.

An automatic "Livelihood" feature lets the viewer see changes in a document quickly, which can be very useful in business situations where speed and security are critical.

The font type and point size settings can be customized, and the interface is made much more intuitive than older versions. The demographic, content, and document search tools are better, with better sorting criteria, and the content-recognition tools are also improved.

It all makes PDF Expert a more attractive type tool than Acrobat Reader for viewing documents.

If we want to just reload the original exposure, or replace the sky, we can do it in the camera. So the reference files for their photo are not being changed, but it's just the parts that we want to change. If there's an effect we want to apply, then they're the reference files to apply the tool. And if we want to serially go through each image in our series, we can quickly access all our references. We can also use existing data to generate the key and exposure. So, if we have a color of grass, we can use the grass, scale it, shade

it, and then make a key. Channels and individual sound files are also used.
